CONTEXT

The Inflation Reduction Act (IRA) represents one of the boldest investments in clean energy infrastructure of this decade. However, while the structure of IRA tax credits has been around for decades, the incentives for tax-exempt entities have not. With months to catch up with the 20+ years that corporations have spent learning how to leverage tax code to develop projects, applicable entities are struggling to take advantage of the incentives. We must bridge the gap between knowledge and expertise so that the environmental and community benefits of the IRA are realized. In order to do this, **we built two complementary resources that provide tax, financial and legal expertise to applicable entities depending on where they are in the process of setting up clean energy projects: the Clean Energy Tax Navigator (“the Navigator”), a one-stop-shop to claim direct pay, and the Project Finance Hub (PFH), a clearinghouse for tools and guidance to finance clean energy projects.**

Our target audience consists of tax-exempt organizations who need tax, legal or financial expertise to set up clean energy projects. This includes State governments, municipalities, frontline communities, Tribal groups, Territories, NGOs and other tax-exempt entities who do not have the capacity or resources to navigate complicated tax code on their own.

OUR APPROACH

Applicable entities need support designing projects, securing financing and navigating complicated tax code to take advantage of these credits. Our goal is to encourage and move people along the process of developing clean energy projects by meeting their technical, financial and legal needs as quickly and efficiently as possible. Therefore, we built the Clean Energy Tax Navigator + Project Finance Hub to provide prompt and cost-efficient support to key entities driving the clean energy transition.

A complicated process requires a sophisticated solution.
